

CISPA travel-sheet exercise · wireframes

The admin officer needs to see what really changed between **v1 Planning** → **v2 Approved** → **v3 Reconciled**. Both directions show every trip on **one line** — unchanged fields appear once, and only the cells that changed are coloured by how much they matter.

HOW CELLS ARE COLOURED

STATUS ACROSS THE 3 SNAPSHOTS

Every trip shows its lifecycle

planned

 ›

approved

 ›

final

 across v1 / v2 / v3, so a changed status stands out.

no-show

 = the traveller did not attend the booked trip.

Reads as: lands on changed trips first (1); each row carries its own v1→v3 history, expandable inline like T-2911 (2); bright vs. pale vs. plain separates real change from noise, unchanged trips collapse to a count (3); search + change-type/department filters + the “hide cost Δ < €50” toggle narrow the list (4).
